Interactive API Documentation | Endpoint Explorer

Explore our Swagger-generated interactive API documentation

Updated this week

https://{slug}.nationbuilder.com/api/v2/docsExplore our Swagger-generated interactive API documentation, including:

- Listings of all available API endpoints
- Allowed methods for each endpoint, including example API request body and expected response body
- Complete object schemas listing allowed and required object attributes/fields
- List of associated object types that can be sideloaded/sideposted
- Fully interactive if provided with a valid API token – send test HTTP requests from within this documentation

To explore end points and example codes, visit: https://nationbuilder.com/api/v2/reference

If you have an existing nation and would like to utilise the interactive, explorer, insert your slug into the following URL: https://{slug}.nationbuilder.com/api/v2/docs

For more flexible API testing (e.g. adding complex filters or other parameters beyond what the documentation allows for), try using Postman or Reqbin.
